

## Ice Arena Log of Air Quality Testing

Facility Name	Arena Name (if applicable)
Time Period of Log	Arena Manager Signature
Notes: Test at board height at the red line of the	ice. Measurements should be taken 20 minutes after completion of a
resurfacing. If edging is done when the arena is c	losed to the public, measurement should be taken prior to reopening.
Mascurament fraguency:	

- Combustion-powered resurfacer: at least twice every 7 days (At least 1 weekend day & the next busiest day)
- Combustion-powered edger: at least once every 7 days
- Other fuel-burning equipment: if open to the public, every 15 minutes; if not open, prior to opening next day

Logs must be available when open to public. Submit a copy of the logs to MDH by: Jan. 15, April 15, July 15, Oct. 15

Acceptable air quality: Carbon Monoxide  $\leq$  20 ppm, Nitrogen Dioxide  $\leq$  0.3 ppm. Exceedances must be reported to MDH. Please see "Indoor Ice Arena Exceedance Form" for further information.
