COVID-19 medication, called monoclonal antibodies, can help people ages 12 and older fight their illness. It can also help prevent illness in certain people.

If you are sick with COVID-19, medication can stop you from getting even sicker, and help shorten the amount of time you are sick. You may be able to get medication if:

- You test positive for COVID-19.
- Your symptoms started less than 10 days ago.
- You are not hospitalized.

If you have been close to someone with COVID-19 or are at high risk of being close to someone with COVID-19, you may also be able to get medication if:

- You have not had two doses of the Pfizer or Moderna vaccine, or one dose of Johnson & Johnson vaccine.
- You have a weakened immune system (for example, if you have an immunocompromising condition, or are taking immunosuppressive medications).

Most COVID-19 medications are available at no cost to you.

Visit COVID-19 Medication Options (health.mn.gov/covidmeds) or talk with a health care provider to see if you may be eligible and to find a clinic.

You can also call the COVID-19 Public Hotline at 1-833-431-2053, Monday through Friday from 9 a.m. to 7 p.m., Saturdays from 10 a.m. to 6 p.m. to get connected to a clinic.
