# WEEKLY COVID-19 REPORT

7/16/2020

This MDH Weekly COVID-19 Report presents data in an easy to interpret way and enhances the information provided in the daily <u>Situation Update for COVID-19</u> web page with trends and situational insights as well as trends over time.

- Minnesota Situation Update for Coronavirus Disease 2019 (COVID-19) (https://www.health.state.mn.us/diseases/coronavirus/situation.html) Updated daily at 11 a.m.
- Coronavirus Disease 2019 (COVID-19) Cases in the U.S (https://www.cdc.gov/coronavirus/2019-ncov/cases-updates/cases-in-us.html)
- Neighboring states' COVID-19 information:
  - Wisconsin: Outbreaks in Wisconsin (https://www.dhs.wisconsin.gov/outbreaks/index.htm)
  - lowa: Novel Coronavirus (COVID-19) (https://idph.iowa.gov/Emerging-Health-Issues/Novel-Coronavirus)
  - North Dakota: <u>Coronavirus Cases (https://www.health.nd.gov/diseases-conditions/coronavirus/north-dakota-coronavirus-cases)</u>
  - South Dakota: Novel Coronavirus Updates and Information (https://doh.sd.gov/news/Coronavirus.aspx)

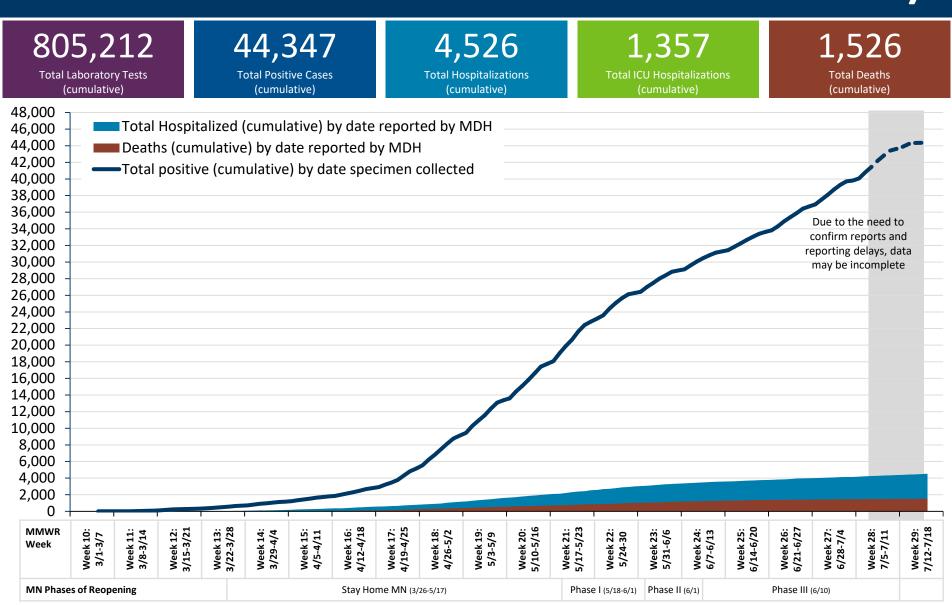

#### About Minnesota COVID-19 Data

- Many people with COVID-19 are not tested, so the laboratory-confirmed cases in this report represent only a fraction of the total number of people in Minnesota who have had COVID-19. Data is for cases that were tested and returned positive.
- All data is preliminary and may change as cases are investigated.
  - Many data points are collected during case interviews. Data presented below is for all cases, regardless of interview status. Data for cases pending interview may be listed as "unknown/missing".
- Weekly data is reported by MMWR week, which is the week of the year assigned by the National Notifiable Diseases Surveillance System for the purposes of disease reporting and publishing.
- Numbers listed as cumulative total are cumulative since Jan. 20, 2020.

### COVID-19 Overview Summary

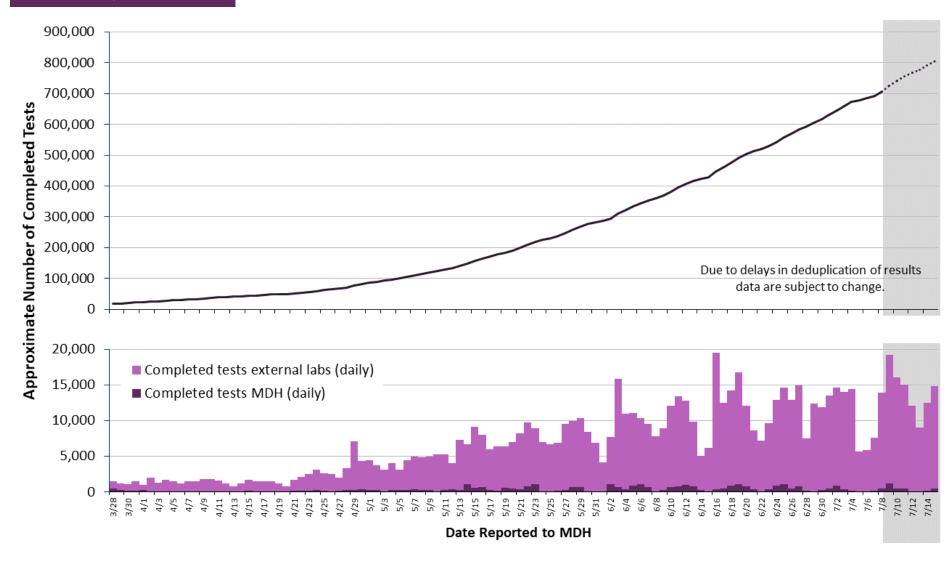

More information on the Phases of Reopening can be found at: Minnesota's Stay Safe Plan (https://mn.gov/covid19/for-minnesotans/stay-safe-mn/stay-safe-plan.jsp)

Detailed data for this chart is outlined in the following pages. Tables of data are provided in the Minnesota Situation Update for Coronavirus Disease 2019 (COVID-19) (https://www.health.state.mn.us/diseases/coronavirus/situation.html)

Minnesota Department of Health Weekly COVID-19 Report: Updated 7/16/2020 with data current as of 4 p.m. the previous day.

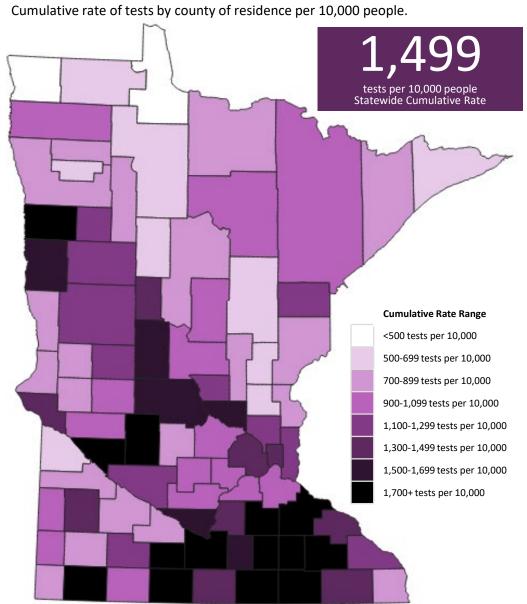

### Laboratory Tests for COVID-19

805,212
Total Laboratory Tests (cumulative)

Up to date data for this chart is provided in the Minnesota Situation Update for Coronavirus Disease 2019 (COVID-19) (https://www.health.state.mn.us/diseases/coronavirus/situation.html)

#### Laboratory Test Rates by County of Residence

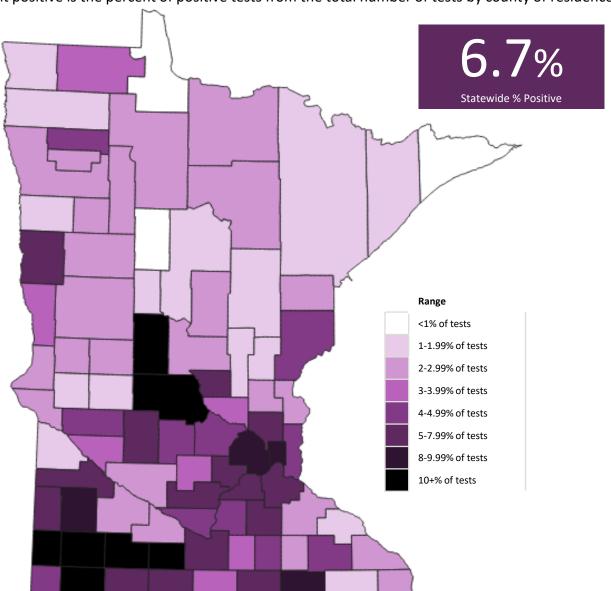

County	Number of Tests	Cumulative Rate
Aitkin	1,069	660

#### Weekly Case Rate by County of Residence

Number of cases by county of residence in Minnesota per 10,000 people by week of specimen collection.

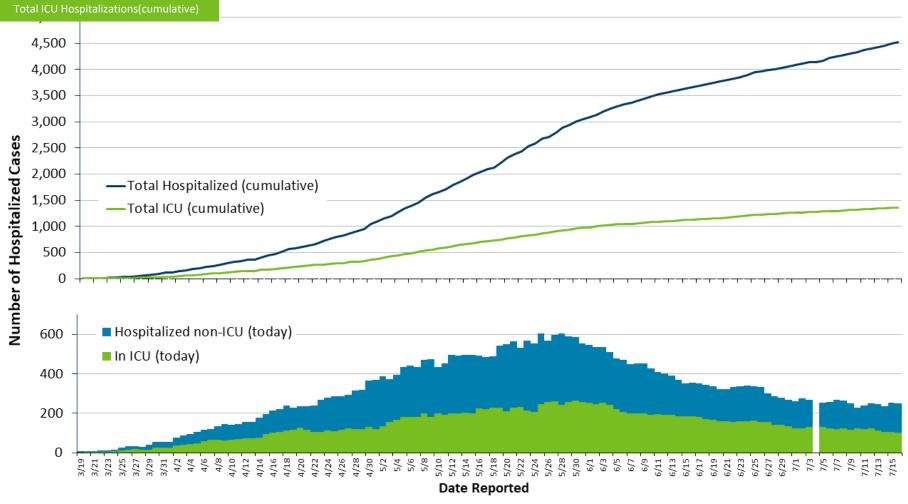

### Hospitalizations for COVID-19

4,526

Total Hospitalizations(cumulative)

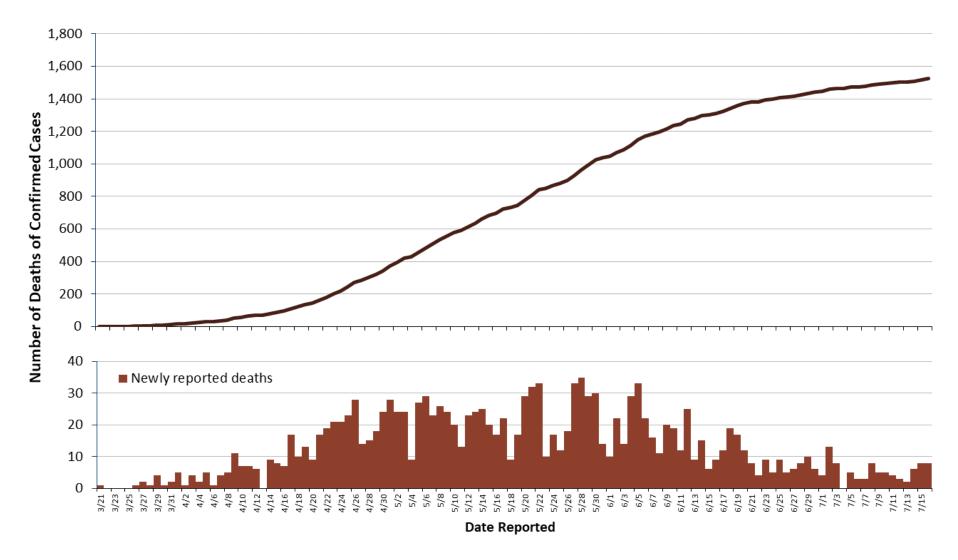

1,357

Up to date data for this chart is provided in the Minnesota Situation Update for Coronavirus Disease 2019 (COVID-19) (https://www.health.state.mn.us/diseases/coronavirus/situation.html)

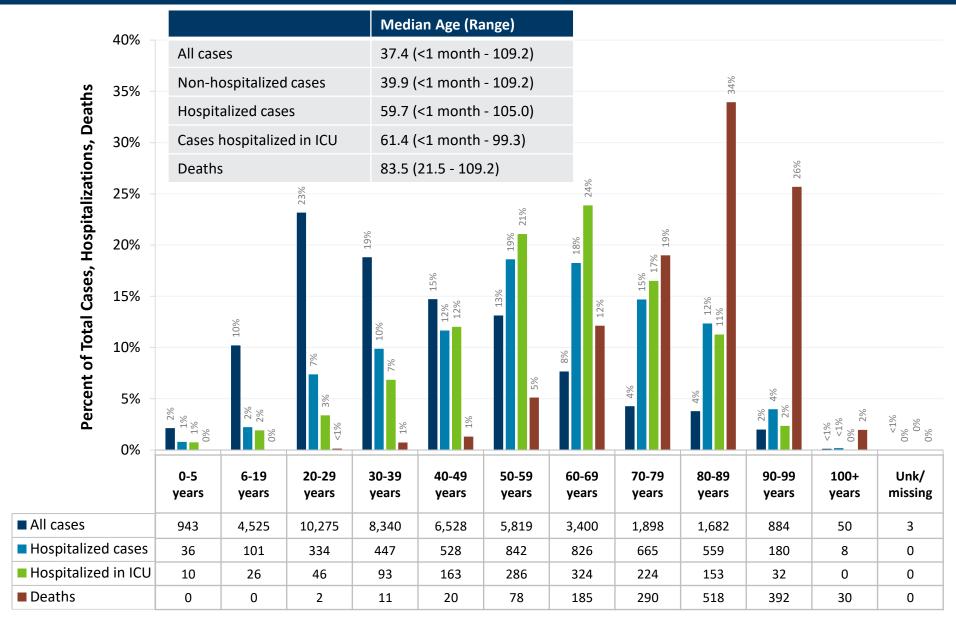

#### COVID-19 Deaths

1,526
Total Deaths (cumulative)

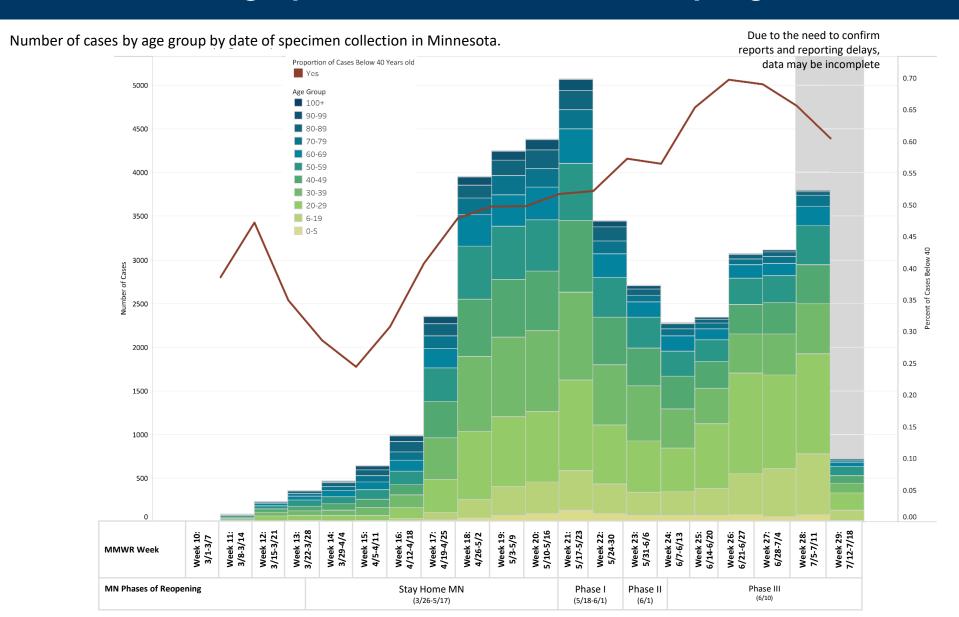

Up to date data for this chart is provided in the Minnesota Situation Update for Coronavirus Disease 2019 (COVID-19) (https://www.health.state.mn.us/diseases/coronavirus/situation.html)

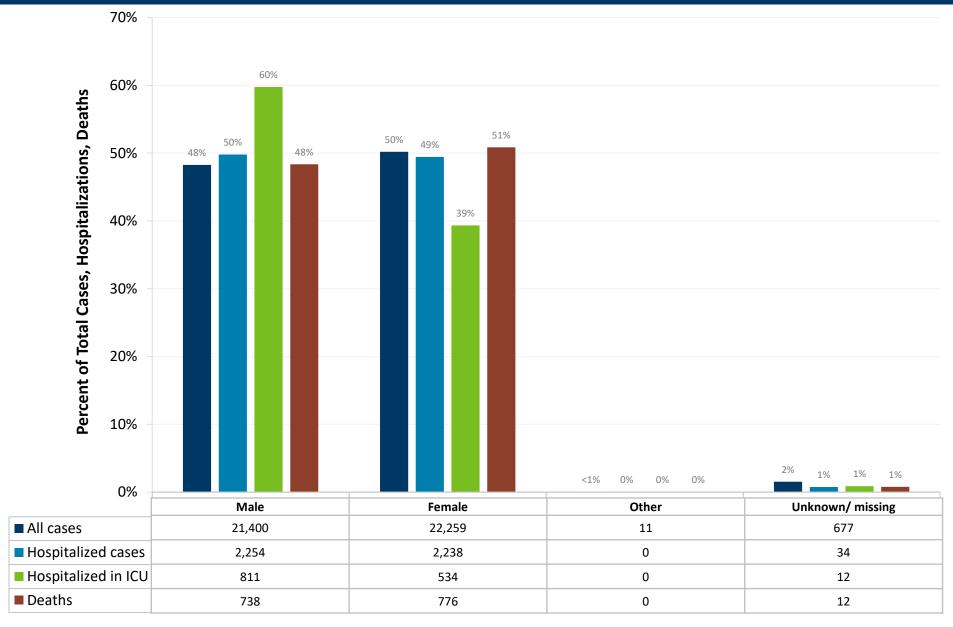

## Demographics: Age

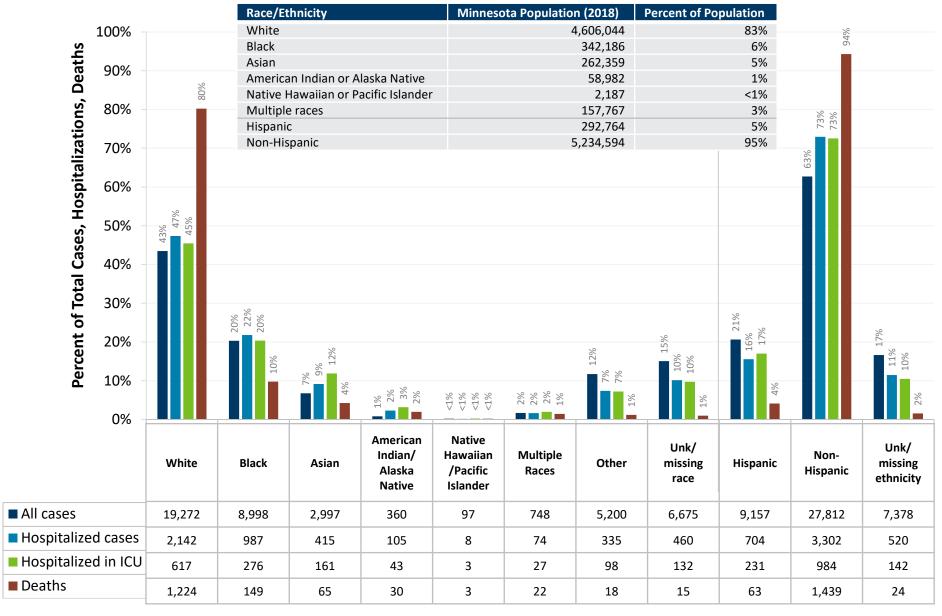

#### Demographics: Number of Cases by Age and Date

# Demographics: Gender

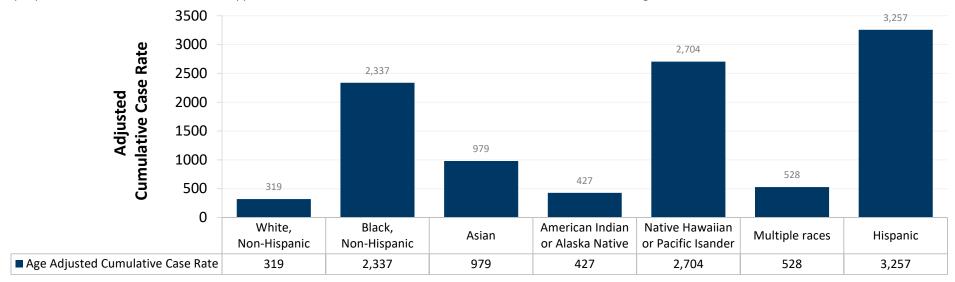

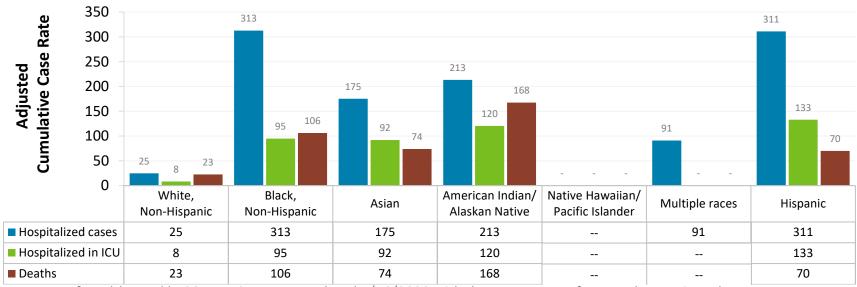

# Demographics: Race and Ethnicity

#### Race & Ethnicity: Age-Adjusted Rates

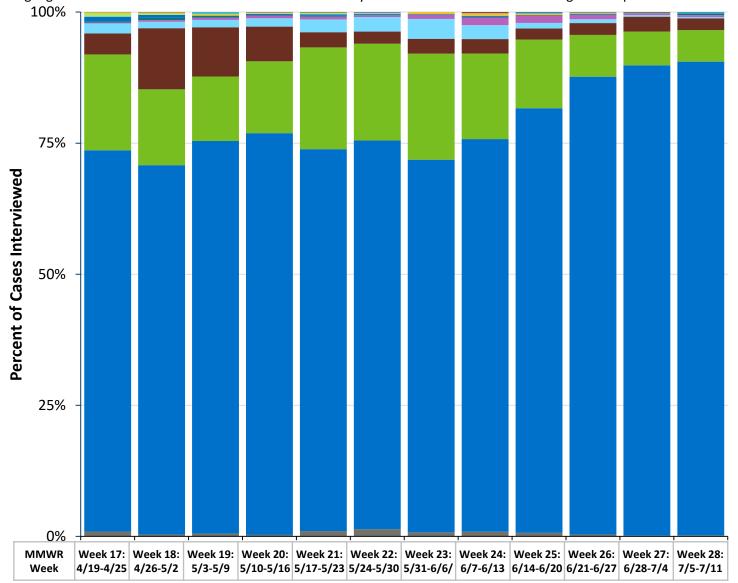

Age-adjusted rates allow us to compare rates for racial and ethnic groups that have very different age distributions in Minnesota; they essentially allow us to look at what the rates would be if the underlying population age distribution was the same for all races. Cumulative case rate is the number of cases by race or ethnicity per 100,000 people in Minnesota. Rates have been suppressed when total cases are less than 25 or the relative standard error is greater than 0.3.

# Demographics: Language

Language needs for cases interviewed. It is assumed that any interview recorded as not needing an interpreter was conducted in English.

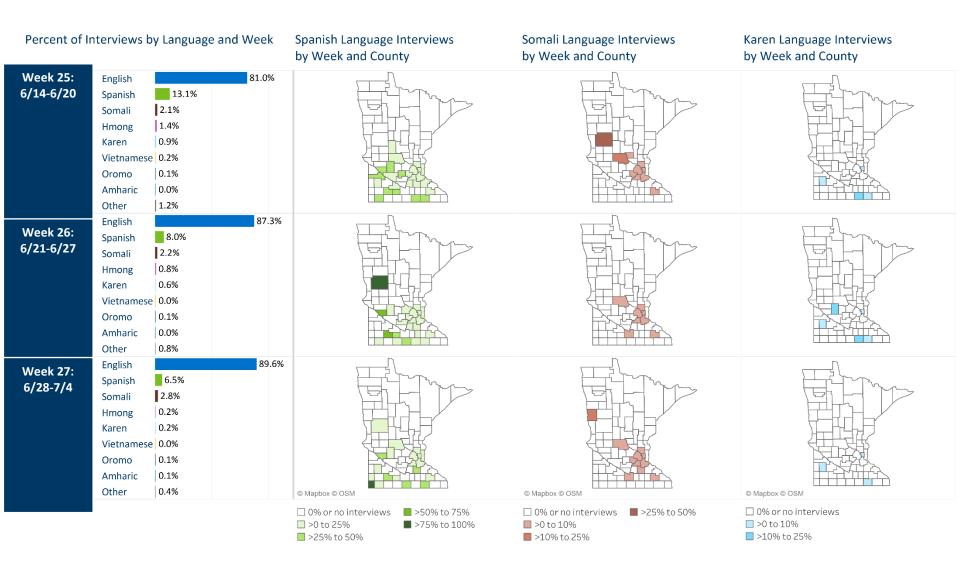

Language	Percent of interviews
Mandarin	<1%
■ Cantonese	<1%
Russian	<1%
■ Arabic	<1%
Vietnamese	<1%
Laotian	<1%
■ Amharic	<1%
Oromo	<1%
■ Hmong	1%
Karen	2%
■ Somali	5%
Spanish	14%
■ English	77%
Other	1%

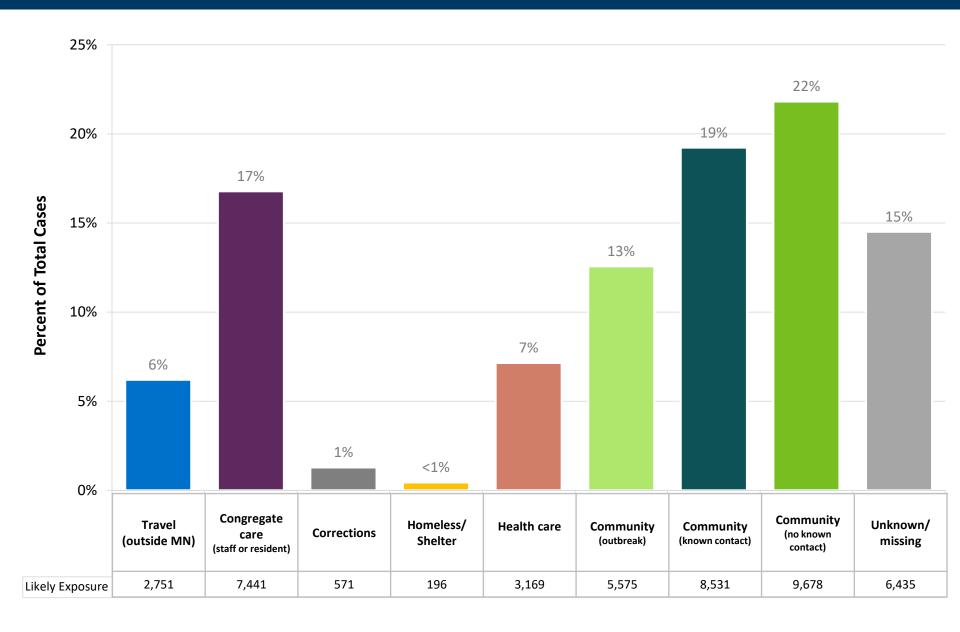

#### **Specimen Collection Date**

#### Demographics: Language by County of Residence

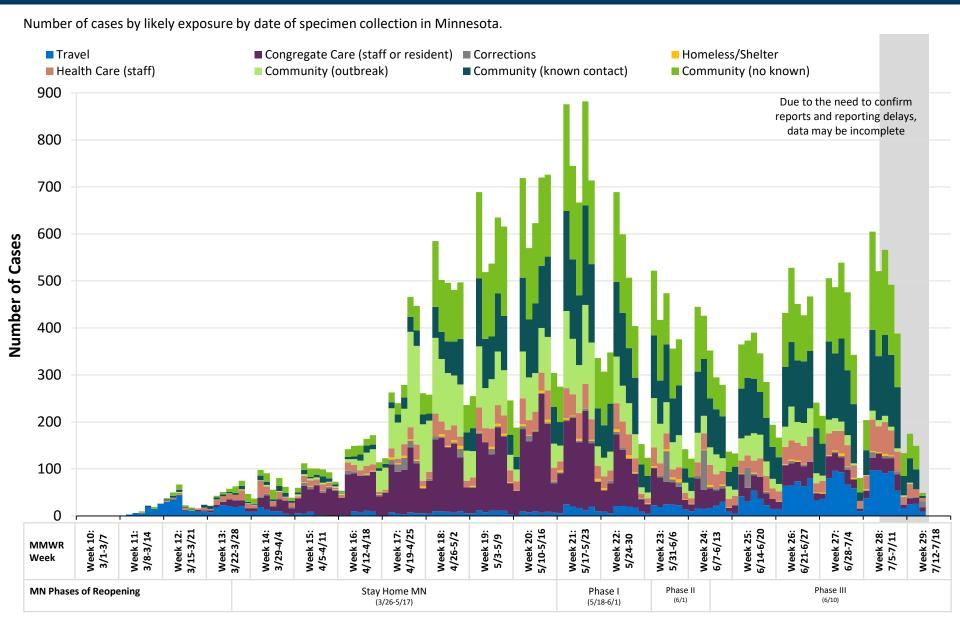

Percent of interviews by language and week of specimen collection.

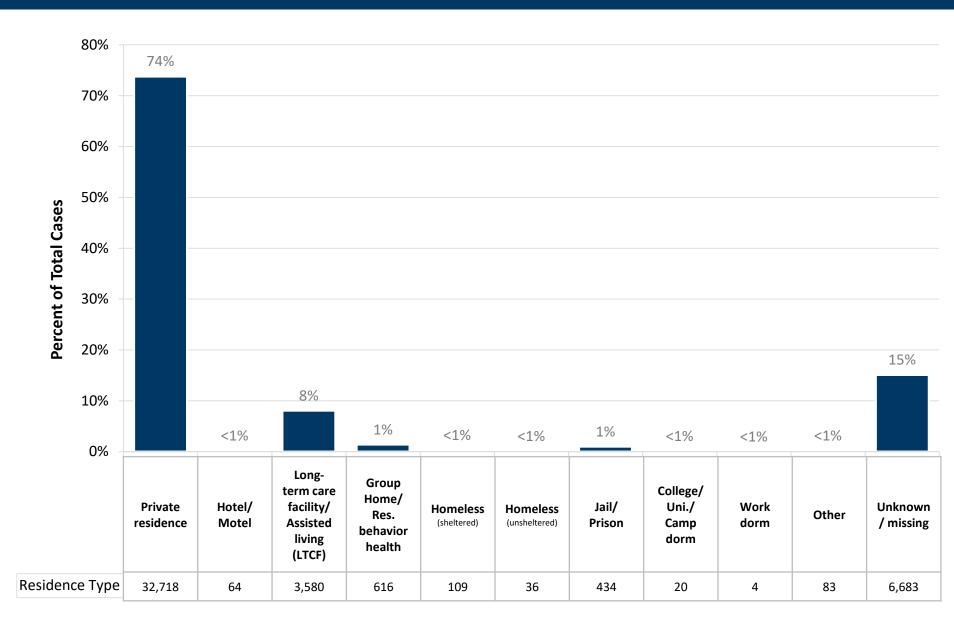

# Likely Exposure

#### Cases by Likely Exposure and Specimen Collection Date

# Residence Type

### Occupational Related Cases: Health Care

This data is for all cases with an occupation as health care staff. Not all health care workers have a likely exposure as health care staff.

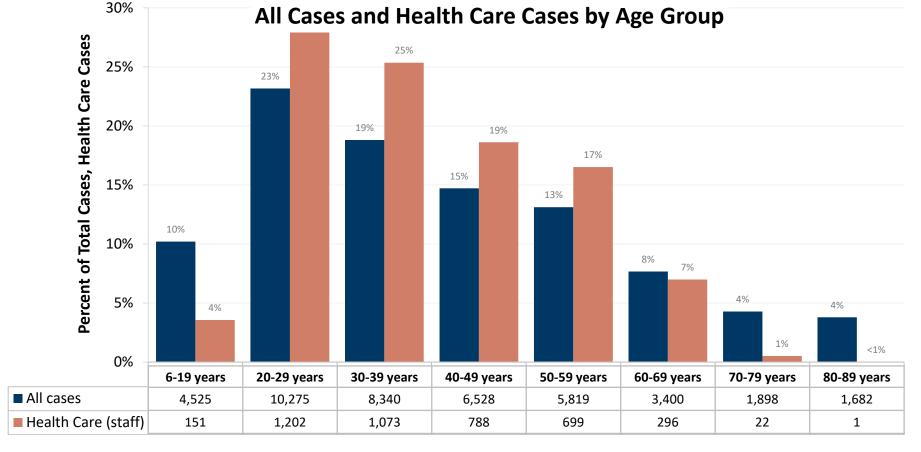

4,232
Total Health Care Workers (cumulative)

3,169

Total Health Care Workers with Likely Exposure as Health Care Staff (cumulative)

230

Total Health Care Staff Hospitalized (cumulative)

### Syndromic Surveillance

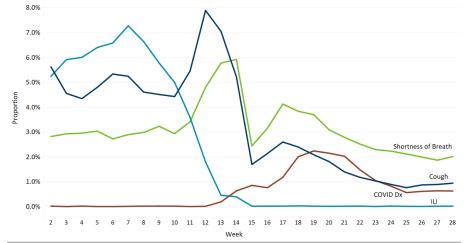

These syndromic surveillance data come from the Encounter Alert Service (EAS), which is utilizing an existing service to support and leverage the development of this activity. These data provide situational awareness to help inform public health decision making, resource allocation, and other actions.

Syndromic surveillance is a type of public health surveillance that uses near real-time data to help identify unusual activity that might need further investigation. These data help public health officials detect, monitor, and respond quickly to local public health threats and events of public health importance. The Minnesota Department of Health is currently using data on COVID-19-related symptoms and chief complaints reported during emergency department and inpatient hospital visits to identify trends. This data can provide an early signal that something is happening in a community with the outbreak even if case counts are not increasing at that time.

Data include emergency-department and inpatient hospital visits for COVID-like illness through July 12, 2020. Categories are based upon discharge diagnosis codes.

Through July 12, 2020, these data represent all patients from about 100 hospitals in Minnesota, covering approximately 84% of the hospital beds statewide. Efforts are underway to expand hospitals to more fully represent the state.

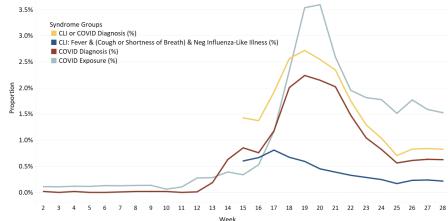

Proportion of hospital-treated cases for COVID-like symptoms and influenza-like illness (ILI)

NOTES: Data include emergency-department and inpatient hospitalizations for COVID-like and influenza-like illness through July 12, 2020. Categories are based upon discharge diagnosis codes.

Through July 12, 2020, these data represent all patients from about 100 hospitals in Minnesota, covering approximately 84% of the hospital beds statewide. Efforts are underway to expand hospitals and payors to more fully represent the state.

Proportion of hospital-treated cases for COVID, COVID-like illness (CLI), and COVID Exposure

NOTES: Data include emergency-department and inpatient hospitalizations for COVID-like and influenza-like illness through July 12, 2020. Categories are based upon discharge diagnosis codes, Due to a transition in data sources, the CLI condition and CLI or COVID Diagnosis codes from week 15 forward.

Through July 12, 2020, these data represent all patients from about 100 hospitals in Minnesota, covering approximately 84% of the hospital beds statewide. Efforts are underway to expand hospitals and pawors to more fully represent the state.
